FROM CONCEPT

For more than 30 years, Pro Power Services' focus has been commercial and industrial electrical contracting, providing "one stop for all" services. We are bonded and licensed and equipped to help from the first stages of planning, permitting and design all the way to the finished project and clean-up. Some of our clients are contractors that work directly with state government projects, and some are privately held companies. In addition, we are the certified installer of electric vehicle charging systems.

TO COMPLETION

OUR 8 STEP PROCESS

From single station setups to 100-station AC setups to fast DC charging needs, Pro Power Services can recommend optimal EV charging products, provide site surveys to configure EV charging to meet the needs of your business, and provide individual power system capability studies. We even work with local governing bodies and utilities to expedite your project and make it go smoother and with less delay. We provide city plans, help obtain permits, and ensure that your installation adheres to all requirements. We can even upgrade older EV charging systems to modern, high-power solutions in order to meet your EV charging needs.

WHAT MAKES US DIFFERENT?

KNOWLEDGE AND EXPERIENCE

Pro Power Services has proudly helped California businesses keep the lights on and appliances running since we first opened back in 1987. We've become the name commercial and industrial customers turn to when they need something done, because we have a reputation for doing it right. Whether you're simply looking to provide electric vehicle charging to customers or employees in your parking lot, or you're looking to stock your entire fleet with electric-powered vehicles that will need nightly charging, Pro Power Services can set you up with the charging stations you need for all makes and models of electric vehicles. And we do all of this while offering a superior service, quality, and flexible planning in order to minimize the impact on your business. Our staff go through vigorous training and continuing education to keep up with latest technology and innovation.

“We have used Industrial Pro Power Services here at Rusnak Auto Group for many years now, on a variety of different projects. With the push for a cleaner environment and the development of electric vehicles, we have been purchasing and installing EV chargers at most of our fifteen dealerships in Southern California, using Industrial Pro Power Services to complete the infrastructure and install processes at those locations. With the demand for higher and higher charging speeds, we continue to install more and more EV charging stations, and they have been very responsive to our priorities. They are very competent, have great attention to details, and they are very reasonably priced. I very much enjoy working with them and would highly recommend them for any commercial or industrial electrical needs.”

LEN SILVERNAIL

CFM, Executive Director of Facilities and Engineering Rusnak Group

CHARGING DESIGNED WITH YOUR BUSINESS IN MIND

Pro Power Services is a certified installer for the Charge Point EV charging systems, as well as many others that adhere to our stringent standards of quality and durability. We want to make getting the charging solution you're looking for an easy and stress-free experience, and that's why we always use products that we know will provide you and your business with the best experience in both short and long-term applications. We also hold our workmanship to high standards as well because we know that's what you demand for your business. All our EV charger installations are turnkey and ready to handle your business needs.
